

THERMAIR BURNERS

**For Process Air Heating and
General Oven Applications**

**Fixed air performance
provides easy setup and
adjustment**

The Eclipse ThermAir burner is a nozzle-mixing burner with packaged air blower that's designed to fire with fixed combustion air over a wide gas turndown range. Fixed air operation plus integral air and gas orifices make the ThermAir one of the simplest burners ever to quickly setup and adjust.

ThermAir burners are ideal on heaters, textile ovens and in situations where the fuel is highly variable (800 Btu/cf to 3200 Btu/cf). Plus they're perfect for ovens needing additional air to carry moisture away from the product being heated.

Check out these quality construction and performance features:

- Easy to install, operate and maintain. Right or left hand piping; readily adapts to your present system. Burner can be disassembled from the rear.
- Global design: metric/English gas interface.
- 30:1 turndown with UV scanner or Flame Rod.*

**Flame Rod not available on all models.*

- Multi-fuel capability (natural gas, propane, butane) without changing nozzle.
- Direct spark ignition.
- Low NOx emissions: 60 ppm at high fire.

Like all Eclipse Combustion products, you can be confident that ThermAir burners are unsurpassed for quality, safety, reliability and efficiency.
